

Abstract

Title of Bachelor's thesis : "Use of tobacco products by UK FTVS students".

Goal: The aim of this bachelor's thesis was to find out how many percent of UK FTVS students use tobacco products. The sub-task was to examine which of the tobacco products students used the most, why they started smoking and whether they had already tried or wanted to quit smoking or using other tobacco products. Whether smokers and occasional smokers were aware of the risks associated with the use of tobacco products.

Methods: The survey was conducted in the form of a poll that only UK FTVS students could participate in. The poll was anonymous and was published on a Facebook page attended by students of the aforementioned faculty.

Results: The results were processed using graphs. A combined total of 213 students completed the questionnaire and of those 70% are non-smokers, 20.2% intermittent smokers and 9.9% smokers. The most commonly used tobacco product among UK FTVS students is a classic cigarette, followed by nicotine bags.

Key words: harmful substances in cigarettes, tobacco history, nicotine
